SUSTAINABLE SALMON FARMING PLAYS AN IMPORTANT ROLE IN FEEDING THE WORLD.

“GSI was a game-changer when it launched, but we never anticipated the level of impact it would have, not only on salmon farming, but on the food sector as a whole. In no other sector have we seen change at the speed and scale as we have done through the GSI.”

Jason Clay, Senior Vice President, Food & Markets, World Wildlife Fund

“Aquaculture, done in a socially and environmentally friendly manner, is the only way to meet the growing demand for seafood, while also creating jobs, generating revenues, and taking pressure off over-stretched capture fisheries.”

Randall Brummet, The World Bank

According to the United Nation’s Food and Agriculture Organization (FAO), aquaculture is growing faster than any other major food production sector. 3

Demand for protein is set to double by 2050 2

50% of seafood is currently farmed. Aquaculture is needed to support wild fish stocks 3

“Since 1961 the annual global growth in fish consumption has been twice as high as population growth, demonstrating that the fisheries and aquaculture sector is crucial in meeting FAO’s goal of a world without hunger and malnutrition.”

José Graziano da Silva, FAO Director-General

“All forms of food production can have environmental impact, of course. But new technology and lessons from the last 40 years have led to better practices that are being adopted by substantial segments of the industry.”

The Nature Conservancy

Farmed fish is the most resource-efficient animal protein on the planet 5

Feed Conversion Ratio 6

Aquaculture: 1.2-1.5*

Capture fisheries: 1.7-2

Fresh Water 6

Aquaculture: 1 Gallon

Capture fisheries: 2,000 Gallons

Carbon Footprint 6

Aquaculture: 9.8*

Capture fisheries: 42.3, 57.6, 337.2

Aquaculture could feed the world and protect the planet.

“Aquaculture is inherently a resource-efficient means of producing food. Marine aquaculture requires no land and minimal fresh water.”

Robert Jones, Aquaculture Lead, The Nature Conservancy

WHAT IS THE GLOBAL SALMON INITIATIVE?

The Global Salmon Initiative (GSI) is a leadership initiative established by leading salmon farming CEOs from around the world.

OUR VISION

GSI members have a shared vision of providing a healthy and sustainable source of protein to feed a growing population, while minimizing their environmental footprint and continuing to improve their social and economic contribution.

To reach this vision, industry-wide change is needed and the GSI believes collaboration is the key to achieving this at speed and at scale.

Through focusing on its four #PathwaysToTheFuture—responsibility, transparency, collaboration, and innovation—the GSI believes it can drive significant improvements in the sustainability performance of the aquaculture sector, making farmed salmon a healthy and sustainable solution to feed a growing population.
